

# Leading Smart Card Solutions Provider to Debut at Web Summit Rio 2026

Asia's top smart card and payment solutions pioneer to reshape global card issuance operations with the launch of a new production management platform.

**RIO BRAZIL - June 8, 2026** – Goldpac, a premier smart card and payment solutions company, will be debuting in Latin America at **Web Summit 2026 (booth E214)** showcasing their **award-winning card finishings** and introducing its latest **card production management platform** disrupting the card issuance industry.

## Captivating Smart Card Effects and Technology

In the current, digitally saturated world, tactile user experiences evoking feelings of luxury, uniqueness, and trust lead to stronger brand identity. The physical card user experience can be elevated with captivating effects and stimulating technologies including **metal VIP cards, LED lights, encrusted jewels, and environmentally friendly materials** which are all showcased at the event.

Since 1993, Goldpac has helped financial institutions and retail brands foster customer loyalty and card utilisation with cutting-edge card technologies, finishings, and designs, earning them 53 ICMA Élan Awards.

## All-Encompassing Card Production Management Platform

The difficulty with existing EMV issuance solutions is the cost and complexity of requiring numerous issuance certifications, security compliance measures, issuance software, coupled with ensuring compatibility between hardware, EMV chips, software, and card schemes in a traditionally out-sourced service provider arrangement. Now, with IIS, issuers and bureaus alike, can host this solution in-house and directly manage their own network of instant card issuance network points, delivering added speed, bypassing mail delays, improving efficiency and enhancing the consumer experience.

Leveraging Goldpac's 30 years' expertise as one of the foremost producers of payment card products in the world, the IIS (Integrated Issuance Solution) is introduced to help personalisation bureaus and card issuers consolidate the ordering, manufacturing, and personalisation processes. It is a complete **end-to-end industrial platform for multi-scenario card issuance management**, transforming production efficiency and lowering operating costs through the integration and automation of production processes.

**Key features include:**

- Card order management
- Personalisation and profile management
- Key management system
- Data preparation
- Device monitoring
- Digital process control

## **Comprehensive Card Issuance Hardware**

Other staple card issuance products range from portable desktop terminals to self-service kiosks which are applicable to a wide range of industries with customisable eKYC registration components. They offer custom and streamlined onboarding to card printing journeys by integrating remote hardware with management platforms, facilitating distributed card issuance to help increase accessibility, card activation while mitigating unnecessary queues and reducing in-branch traffic.

Visit Goldpac in **pavilion 2 at booth E214** to chat with the LATAM team on potential partnerships.

## **About Goldpac**

Goldpac provides products and solutions that addresses the financial industry's diverse needs for secure, convenient, and easy-to-use payment solutions. These solutions cover user onboarding, personalisation, and payment device issuance systems, self-service kiosks, and desktop printers.

Its operations cover a wide range of businesses and sectors including financial services, telecommunications, social security, healthcare, transport, retail, mobile payment, identity, third-party payment platforms and other security services domains.
