HOTEL RESERVATION
AND MANAGEMENT KIOSK
MODEL: HT-141-A5

Enhance the guest experience and operational efficiency by reducing wait time and improving service availability. This smart terminal allows hotel guests to check-in, manage their reservations, and access a range of hotel information and services at their own convenience. Hotels can triage traffic and offer an alternative check-in experience especially for VIP or regular patrons.

SUITABLE FOR

Hospitality - Hotels and membership clubs

PAIN POINTS

- Inconvenience of long queues and wait times for reception services
- Inconsistent service quality
- Better manage manpower and workloads
- Security of customer details and safety of reception staff

KEY BENEFITS

- ✓ Reduce guest wait time and reception staff workload
- ✓ Increased availability of services and information
- ✓ Improve operational efficiency
- ✓ Hotel digitalisation without high cost of IT infrastructure or staff

Customer self-service

- Reservation management
- Payment and invoice management
- Room check-in and checkout with room key card issuance
- Face and ID verification
- Vending and amenity booking

Hotel reception backend

- Reservation management
- Room management
- Room key card management
- Checkout and deposit management

Hotel operations backend

- Reservation management
- Facilities and amenities management
- Services upselling and advertising
- Settlement management

CUSTOMER SELF-SERVICE FEATURES

The integrated booking system allows hotel guests to experience a seamless process from booking rooms on their mobile phones to checking in at the hotel through the self-service kiosk. Without waiting in long queues at the reception, customers can conveniently check in, manage their reservations, and access hotel services anytime of the day.

FEATURES FOR HOTEL CUSTOMERS

- Seamless reservation management from mobile booking to kiosk check-in
- Online payment and invoice management
- Self-service room check-in, stay extension and checkout process
- Instant room key card issuance and post-stay collection
- Secure face and ID verification
- VIP and member services
- Booking of hotel facilities and amenities
- Vending for products and necessities
- Microsite for hotel information and partner merchant promotions
- Customer service chat

USER FLOW

HOTEL RECEPTION FEATURES

Lighten manual and repetitive workload of the reception staff by diverging traffic to the self-service kiosks. The digital operations system allows quick access of data relating to membership information, hotel room status, and facilities booking for faster, more efficient customer service.

FEATURES FOR HOTEL RECEPTION STAFF

- Room and reservation management
- Room key card management
- Instant room status monitoring for room allocation
- VIP members differentiation
- Member management
- Checkout and deposit management

ROOM MANAGEMENT USER FLOW

HOTEL OPERATIONS MANAGEMENT

The network-based system is synchronised between the headquarters and hotel branches, allowing staff to have quick access to customer and hotel data, greatly improving operational efficiency without the need to change existing hardware, management systems, or IT infrastructure. It can be customised for any industry with the need for self-served booking and access control.

FEATURES FOR HOTEL MANAGEMENT

- Unified services network configuration to synchronise data between headquarter and hotel branches
- Data-based operations management connecting digital management platforms with the hotel's PMS system, self-service kiosks, mobile terminals, and staff terminals
- Coordinates and manages activities between customers, reception, cleaning staff, and more
- Report management and analytics on rooms, tasks and staff
- Marketing management including advertisement placement and partner merchant promotions

KEY BENEFITS FOR HOTEL MANAGEMENT

- Enhance guest experience
- Ease workloads of operational staff
- Seamless connection to a range of hardware
- Reduces configuration time and maintenance costs

REPORTING

MANAGEMENT REPORTS

- Organisation statistics
- Personnel statistics
- Operational logs
- System status
- Monitoring

FINANCIAL REPORTS

- Cost analysis
- Reconciliation results

TRANSACTION REPORTS

- Daily / monthly / yearly trading reports
- Consumer transaction
